

Eniva Achieves Top 4 in Fastest-Growing Private Companies

FOR IMMEDIATE RELEASE

October 25, 2007

(MINNEAPOLIS, MN) Eniva Corporation was officially awarded the 4th ranked position among the 2007 Fastest-growing Private Companies in Minnesota's 11-county metro area, as reported by the Minneapolis St. Paul Business Journal. The honor was presented during an exclusive presentation ceremony held in downtown Minneapolis, the evening of October 25.

Many successful companies applied for the prestigious award, given annually to high-performing organizations that demonstrate innovation, well-managed growth and successful business expansion. After an extensive evaluation and fact-finding selection process, the group of companies under consideration was narrowed down to 50. These companies were then assigned a final placement. Eniva Corporation's growth profile allowed the company to be among the top winners, with only three other businesses outpacing its performance. Eniva also earned the distinction of being the only corporation that advanced its rank from the year prior. In 2006, Eniva was awarded 12th position.

Upon acceptance of the honor, Eniva Chairman and CEO Andrew Baechler stated, "Eniva has worked diligently over the years to establish itself as a leader in the field of advanced nutritional supplements. Our members throughout the world have helped create the success this honor signifies, and on their behalf, we re-commit our company to serving others and sharing wellness with them. "

Among other companies making the list of honorees were software development groups, enterprise voice, data and technology providers, design engineering firms, commercial banks, retailers, financial consultants and web-based technology companies.

Eniva Corporation, located in Minneapolis, MN, designs, manufactures and distributes concentrated liquid nutritional supplements and other body support products. Founded in 1998, Eniva has earned the distinction of being a pioneer of advanced liquid nutraceutical products and innovative nutrient delivery systems.
