

January 9, 2007

Eniva Corporation
9702 Ulysses Street NE
Blaine, MN 55434

The peanut, almond, milk, egg and gluten testing of the Vibe sample that we received on Wednesday, January 3, 2007 has been completed. The results are listed below.

<u>Sample Identification</u>	<u>Peanut</u>	<u>Almond</u>	<u>Milk</u>	<u>Egg</u>	<u>Gluten</u>
Vibe, Lot #20635506	BLD*	BLD	BLD	BLD	BLD

BLD* Below the limit of detection. The lower limit of detection for the Neogen Veratox® Almond Allergen Quantitative Test, the Neogen Veratox® Quantitative Peanut Allergen Test, the Neogen Veratox® Total Milk Allergen Quantitative Test, and the Neogen Veratox® Quantitative Egg Allergen Test (specific for egg white) is 2.5 parts per million (ppm). The lower limit of detection for the R-Biopharm RIDASCREEN® FAST Gliadin is 10 parts per million. Amounts below these levels cannot be reliably detected in these assays. The R-Biopharm RIDASCREEN® FAST Gliadin is equally cross-reactive with gliadin/gluten for wheat, rye, and barley. One ppm is equivalent to 1 milligram of peanut, almond, milk, egg, or gluten per kilogram of sample product.

IMPORTANT NOTE: If the possible source of allergen contamination in your samples is from fermentation, or consists of fermented or hydrolyzed materials, current test methods cannot measure allergen levels appropriately in these cases. This can result in a severe underestimate of the allergen content of your samples. In these special cases, a BLD reading may be indicated but there still could be enough allergenic residues left over to be capable of causing an allergic reaction. If your sample is of this type, please contact the FARRP lab at 402-472-4484 for further assistance.
